

Primary Constructor:

```
scala> class Student(n:String,a:Int){  
  | def show={  
  | println("Name :"+n+"\nAge :"+a)  
  | }  
  | }  
class Student  
  
scala> var s1=new Student("jeeva",25)  
var s1: Student = Student@42a4b97  
  
scala> s1.show  
Name :jeeva  
Age :25
```

Overriding Methods:

```
scala> class Animal{  
  | def bark={"woooooo"}  
  | }  
class Animal  
  
scala> class Dog extends Animal{  
  | override def bark={"wow wow"}  
  | }  
class Dog  
  
scala> var a=new Animal  
var a: Animal = Animal@4a1934e2  
  
scala> a.bark  
val res1: String = woooooo  
  
scala> var d=new Dog  
var d: Dog = Dog@45e9db77  
  
scala> d.bark  
val res2: String = wow wow
```

Superclass Constructor:

```
scala> class Person(name:String,dept:String){  
  | def show()={  
  | println("Name : "+name)  
  | println("Department : "+dept)  
  | }  
class Person
```

```
scala> class Emp(name:String,dept:String,salary:Double) extends Person(name,dept){  
  | override def show()={  
  | super.show()  
  | println("Salary : "+salary)  
  | }  
  | }  
class Emp
```

```
scala> var e1 = new Emp("jeeva","Data",25000)  
var e1: Emp = Emp@67b2bcbd
```

```
scala> e1.show()  
Name : jeeva  
Department : Data  
Salary : 25000.0
```

Abstract Class:

```
scala> abstract class Animal{  
  | def sound:Unit  
  | }  
class Animal
```

```
scala> class Dog extends Animal{  
  | def sound={println("Dog Sound")}  
  | }  
class Dog
```

```
scala> val d=new Dog  
val d: Dog = Dog@49f8b57d
```

```
scala> d.sound  
Dog Sound
```
