

Scala Debugging Questions

Intermediate Level (10)

Q1

Find the error.

```
val x: Int = "10"  
println(x + 5)
```

type mismatch

Q2

Identify issue.

```
var total = 0
```

```
for(i <- 1 to 5){  
  total = i  
}
```

```
println(total)
```

Expected result should be **sum of numbers**.

total+=i, not added

Q3

```
val list = List(1,2,3,4)
```

```
list.foreach(x =>  
  println(x)  
  println(x*2)  
)
```

Why only first print works?

need to use { }

Q4

```
val numbers = List(1,2,3)
```

```
val result = numbers.map(x => x*2)
```

```
println(numbers)
```

Why result is not printed?

not printed result

Q5

```
def add(a:Int,b:Int)
```

```
{  
  a+b  
}
```

```
println(add(5,10))
```

Why compiler error occurs?

= needed

Q6

```
val data = Map("a"->1,"b"->2)
```

```
println(data("c"))
```

Why runtime error occurs?

"c" is not in data

Q7

```
var x = 5
```

```
if(x = 10){  
  println("Equal")  
}
```

Find the mistake.

Assignment instead of equal to

Q8

```
val list = List(1,2,3)
list.map(x => println(x))
Why map is not ideal here?
```

use foreach

Q9

```
def greet(name:String){
println("Hello "+name)
}
```

greet()

What is the error?

parameter missing

Q10

```
val list = List(1,2,3)
```

```
for(i <- list)
println(i)
println("Done")
```

Why only one statement inside loop?

{ } missing

Advanced Debugging Questions (5)

Q11

```
class Person(name:String){
println(name)
}
```

```
val p = new Person
```

Why compilation fails?

Argument missing

Q12

```
class User{  
  private var age:Int = 0  
}
```

```
val u = new User  
println(u.age)
```

Why error occurs?

private variable

Q13

```
object Test{  
  def main(args:Array[String]){  
    println("Hello")  
  }  
}
```

Why program may not run properly in Scala 3 environments?

procedural syntax is deprecated, requires =

Q14

```
class A{  
  def show(){  
    println("A")  
  }  
}
```

```
class B extends A{  
  def show(){  
    println("B")  
  }  
}
```

What concept is used and what improvement needed?

override

Q15

```
object Config{  
  var url="localhost"  
}
```

```
class Service{  
  val url="production"  
  println(Config.url)  
}
```

Why incorrect value printed?

url is local
