

Section 1 – Intermediate Level (1–12)

Q1 – Type Mismatch Error

Identify the issue.

```
val x: Int = "100"  
println(x + 10)
```

string+number
val x: Int = 100
println(x + 10)

Q2 – Missing Return Type

```
def add(a:Int,b:Int){  
  a+b  
}
```

```
println(add(5,6))
```

def add(a:Int,b:Int):Int={
a+b
}

Q3 – Incorrect Assignment Operator

```
var x = 10
```

```
if(x = 20){  
  println("Equal")  
}
```

```
var x = 10
```

```
if(x ==20){  
  println("Equal")  
}
```

Q4 – Infinite Loop

```
var i = 1
```

```
while(i <= 5){  
  println(i)  
}
```

```
while(i <= 5){  
  println(i)  
  i+=1  
}
```

Q5 – Index Out of Range

```
val list = List(10,20,30)
```

```
println(list(3))
```

```
println(list(2))
```

Q6 – Wrong Map Access

```
val data = Map("A"->10,"B"->20)
```

```
println(data("C"))
```

C not exists

Q7 – Incorrect List Operation

```
val list = List(1,2,3)
```

```
list.map(x => println(x))
```

```
list.foreach(x => println(x))
```

Q8 – Incorrect Tuple Access

```
val data = (10,20,30)
```

```
println(data._4)
```

```
println(data._3)
```

Q9 – Variable Scope Issue

```
if(true){  
  var x = 10
```

```
}
```

```
println(x)
```

x no scope

Q10 – Immutable Variable Error

```
val x = 10
```

```
x = 20
```

var x=10

Q11 – Missing Parameter

```
def greet(name:String){  
  println("Hello "+name)  
}
```

```
greet()
```

greet("jeeva")

Q12 – Null Pointer Risk

```
var name:String = null
```

```
println(name.length)
```

name has no length, so null pointer exception

Section 2 – Advanced Level (13–20)

Q13 – Constructor Parameter Missing

```
class Person(name:String)
```

```
val p = new Person
```

val p = new Person("jeeva")

Q14 – Access Modifier Error

```
class User{
```

```
private var age = 25
}
```

```
val u = new User
println(u.age)
```

private not access directly

Q15 – Method Overriding Issue

```
class A{
  def show()=println("A")
}
```

```
class B extends A{
  def show(x:Int)=println("B")
}
```

```
class B extends A{
  override def show(x:Int)=println("B")
}
```

Q16 – Singleton Object Misuse

```
object Config{
  var url="localhost"
}
```

```
class Service{
  println(url)
}
```

```
class Service{
  println(Config.url)
}
```

Q17 – Missing Override Keyword

```
class A{
  def show()=println("A")
}
```

```
class B extends A{
  def show()=println("B")
}
```

```
class B extends A{  
  override def show()=println("B")  
}
```

Q18 – Incorrect Pattern Matching

```
val x = 5
```

```
x match{  
  case "5" => println("Five")  
  case _ => println("Other")  
}
```

```
case 5 => println("Five")
```

Q19 – Wrong List Filtering

```
val list = List(1,2,3,4)
```

```
val result = list.filter(x => x = 2)
```

```
val result = list.filter(x => x == 2)
```

Q20 – Mutable Collection Modification

```
val list = List(1,2,3)  
list(0) = 10
```

list is immutable
